NOTABLE PROJECTS

Tetris (<https://github.com/Houdini111/Tetris>)

- My personal version of Tetris, built from the ground up by myself in GameMaker with the goal of full customizability. Notable (currently built) features include choices between full random and “bag” random, the ability to change the game board size (via the ini), and frame-rate independence (allowing up to 144Hz).

Personal Website (<https://www.houdini111.me> and <https://github.com/Houdini111/houdini111.github.io>)

- My personal website

Editable Webpage (<https://github.com/Houdini111/Team-MAJAB-CMS>)

- A team project for my Software Engineering II course. Our team of five people were tasked with creating a website that an administrator can log into and then edit the contents of. The exact specifications were mostly left to us and we had to use Agile to make our decisions and implement them.

AWARDS, HONORS, and CERTIFICATIONS

- A.A.S. Degree in Computer Science
- Level 1 Full-Stack Web Development Certification
- Eagle Scout
- Future Artists in Music (FAIM)
- Achievement In Music (AIM)
